

Steps for 'full https' installation for osConcert v9.8+ 2023

IMPORTANT: Users should have a server PHP more than 7.4 up to 8.1.16

Here is what to expect after you have uploaded your osConcert zip file to your server web space.

Please **EXTRACT** the zip file on your server ...it is **NOT** recommended to upload all the files via FTP we cannot guarantee that some files will not get corrupted.

Use your control panel extraction tool...like this cPanel >File Manager

Presumably you have a newly created MySQL Database and login/name/pass details.

Rename the **/osconcert/** directory to what suits your ticketing url. e.g 'bookings' or 'tickets' etc or just leave it as 'osconcert' that's also fine.

Open your browser and type the full https: url to the application

It is very important to write the correct URL according to your SSL set up

If your SSL Certificate is for <https://www>. Make sure that you type that in your browser.

Let's start the installation ...here are the screens you will expect to see:

[Database username](#)

Password:
[Database password](#)

Database Name:
[Database Name](#)

Session Storage: Files Database
[Store user session data as files on the server, or in the database.](#)

Cancel Continue

Enter your Database Server Information

✓ A test connection made to the database was successful.

- Please continue the installation process to execute the database import procedure.
- Please take essential backups if an upgrade is being made to the database.
- It is important this procedure is not interrupted otherwise the database may end up corrupt.

The files to be imported must be located at:

```
C:\Program Files\osConcert\osconcert\osconcert\osconcert\osconcert
```

A database upgrade is available for your osConcert installation.

- osconcert_v9_0_0.sql
- osconcert_v9_0_1.sql
- osconcert_v9_0_2.sql
- osconcert_v9_0_3.sql
- osconcert_v9_0_4.sql
- osconcert_v9_0_5.sql
- osconcert_v9_0_6.sql
- osconcert_v9_0_7.sql
- osconcert_v9_0_8.sql

Cancel

Continue

The files will be imported and the database updated (these imports will be saved also in a database table for you reference and to help the next upgrade)
